

CAROUSEL & SLIDERS

JAVASCRIPT LESSON 2

window.onload

- The onload event occurs when all content (e.g. images) also has been loaded.
- `$(window).load(function() {})`

`$(document).ready()`

- a jQuery function, wrapping and providing consistency to the following events:
 - `document.ondomcontentready` / `document.ondomcontentloaded` - a newish event which fires when the document's DOM is loaded (which may be some time before the images etc. are loaded); again, slightly different in IE and in rest of the world
 - and `window.onload`, which fires when the entire page loads (images, styles, etc.)

FLEXSLIDER

- <https://www.woothemes.com/flexslider/>
- <http://flexslider.woothemes.com/>

ASSIGNMENT

- Add your own slider
- Add links to your images
